Once-daily
Januvia[®]
(sitagliptin, MSD)

Enhancing incretins.
Enhancing physiological control.

JANUVIA[®] for substantial
efficacy with flexibility in a broad
range of patients¹

For initial and adjunct use in patients with type 2 diabetes²

In clinical studies,

- **Substantial HbA_{1c} reduction** through a novel physiologic mechanism of action
- Generally **weight neutral** therapy with a **low risk of hypoglycemia**³
- **Once-daily** oral treatment²

JANUVIA is contraindicated in patients who are hypersensitive to any components of this product. There have been postmarketing reports of serious hypersensitivity reactions in patients treated with JANUVIA. These reactions include anaphylaxis, angioedema, and exfoliative skin conditions including Stevens-Johnson syndrome. Because these reactions are reported voluntarily from a population of uncertain size, it is generally not possible to reliably estimate their frequency or establish a causal relationship to drug exposure.

¹JANUVIA is indicated for initial use as monotherapy or in combination with metformin, a glitazone, a sulfonylurea or a sulfonylurea + metformin, when the current regimen plus diet and exercise does not provide adequate glycemic control.

²As typical with other antihyperglycemic agents (eg, metformin, thiazolidinediones) used in combination with a sulfonylurea, adding JANUVIA increased the incidence of sulfonylurea-induced hypoglycemia compared with placebo. A lower dose of sulfonylurea may be considered to reduce the risk of sulfonylurea-induced hypoglycemia.

Before prescribing, please consult the prescribing information.

Introducing

New JANUMET[®] for 3-Dimensions Control in patients
who need more than metformin alone to achieve goal^{1,3,4#}

In clinical studies,

- **Powerful HbA_{1c}, PPG, and FPG reductions** to help patients get to goal (HbA_{1c} goal <7%)³
- **Comprehensive mechanism of action targets 3 key defects** of type 2 diabetes⁴

[#]HbA_{1c} goal <7%

Before prescribing, please consult the full prescribing information.

PREFACE

In Hong Kong, substances and pharmaceutical products are regulated under the Pharmacy & Poisons Ordinance & Regulations (Cap. 138), the Dangerous Drugs Ordinance (Cap. 134) and the Antibiotics Ordinance (Cap.137). Under the Pharmacy & Poisons Regulations, poisons are further classified into the First Schedule and Third Schedule. First Schedule poisons can be sold in a pharmacy under the supervision of a pharmacist. Third Schedule Poisons can only be sold in a pharmacy upon a prescription given by a registered medical practitioner, registered dentist or registered veterinary surgeon. Articles listed in the Second Schedule are exempted from the provisions of the ordinance & the regulations. Similarly, substances listed in the Part I Dangerous Drugs and Schedule 1 of the Antibiotic Regulations can only be sold in a pharmacy upon a prescription given by a registered medical practitioner, registered dentist or registered veterinary surgeon.

The last issue of Poisons, Antibiotic and Dangerous Drug List was published in September 2004. In that issue, the Poison List only contained the list of Part I and Part II poisons. In this new issue, the First Schedule, Second Schedule and Third Schedule are incorporated in the list of Part I poisons. In looking up a particular poison or class of poison, the reader can tell at a glance whether the poison is also listed in the First Schedule, Second Schedule and Third Schedule of the Pharmacy & Poisons Regulations, or under what condition the poison is exempted.

This consolidated list aims to provide a quick reference for pharmacists, doctors and the trade. If there is doubt, please refer to the Pharmacy & Poisons Regulations (Cap. 138 subsidiary legislation), the Dangerous Drugs Ordinance (Cap. 134) and the Antibiotics Ordinance (Cap.137).

We have to thank the pharmacists from the Department of Health in providing assistance in the compilation of this book. We are always pleased to receive feedback from our readers.
